

# 155M LC Duplex SFP Transceiver MODEL: SFP-ZX-1120

#### Feature:

- 125M 100BASE application
- 155M OC3 application/SDH/SONET
- 1310nm FP laser and PIN photo detector for 2KM, 20KM and 40KM transmission
- 1550nm uncooled DFB laser and pin photo detector for 120KM
- SFP MSA package with duplex LC connector
- +3.3V single power supply
- Power consumption less than 1W
- Operating case temp
- Standard temp: 0~+70°C
- Industrial temp:-40~+85°C
- Compliant with RoHS

## **Absolute Maximum Ratings**

#### Table 1- Absolute Maximum Ratings

|                     | Symbol | Min. | Typical | Max. | Unit | Notes |
|---------------------|--------|------|---------|------|------|-------|
| Supply Voltage      | Vcc3   | -0.5 | -       | +3.6 | V    |       |
| Storage Temperature | Ts     | -40  | -       | 85   | °C   |       |
| Operating Humidity  | RH     | +5   | -       | +95  | %    |       |

#### **Recommended Operating Conditions** Table 2- Recommended operating Conditions

| Parameter            |            | Symbol | Min. | Typical | Max. | Unit | Notes |
|----------------------|------------|--------|------|---------|------|------|-------|
| Operating            | Standard   | TC     | 0    | -       | +70  | °C   |       |
| Case Temperature     | Industrial |        | -40  | -       | +85  | °C   |       |
| Power Supply Voltage |            | Vcc    | 3.13 | 3.3     | 3.47 | V    |       |
| Power Supply Current |            | lcc    | -    | -       | 300  | mA   |       |
| Power Dissipation    |            | Pd     | -    | -       | 1    | W    |       |
| Data Rate            |            |        | -    | 155     | -    | Mbps |       |

# **Electrical Characteristics**

# Table 3- Electrical Characteristics

| Parameter                         | Symbol | Unit | Min. | Тур.  | Max. | Notes |
|-----------------------------------|--------|------|------|-------|------|-------|
| Electrical Characteristics        |        |      |      |       |      |       |
| Supply Current                    | ICC    | mA   | -    | -     | 300  |       |
| Differential Data Input Swing     |        | mV   | 200  | -     | 2400 | 1     |
| Differential Data Output Swing    |        | mV   | 1450 | 1600- | 1750 | 2     |
| Differential Data input impedance |        | Ω    | -    | 100   | -    | 1     |
| Signal Level(LVTTL H)             |        | V    | 2.4  | -     | VCC  |       |
| Signal Level(LVTTL L)             |        | V    | 0    | -     | 0.8  |       |
| Noto:                             |        |      |      |       |      |       |

Note:

1. Internally AC coupled, input termination may be required for CML or LVPECL applications.

2. Internally AC coupled, CML differential output stage.

| 20  | VeeT        | Transmitter Ground           | 1    | Note 5                             |

Note:

- TX Fault is open collector output which should be pulled up externally with a 4.7K ~10KΩ resistor on the host board to voltage between 2.0V and VCC+0.3V. Logic 0 indicates normal operation; logic 1 indicates a laser fault of some kind. In the low state, the output will be pulled to less than 0.8V.
- 2. TX Disable input is used to shut down the laser output per the state table below. It is pulled up within the module with a 4.7~ 10K resistor.

| Low (0- 0.8V):         |
|------------------------|
| Between (0.8V and 2V): |
| High (2.0 – VccT):     |

Transmitter on Undefined Transmitter Disabled

- MOD-DEF 0, 1, 2. These are the module definition pins. They should be pulled up with a 4.7~10K resistor on the host board to supply less than VccT+0.3V or VccR+0.3V.
   MOD-DEF 0 is grounded by the module to indicate that the module is present.
   MOD-DEF 1 is clock line of two wire serial interface for optional serial ID.
   MOD-DEF 2 is data line of two wire serial interface for optional serial ID.
- 4. LOS (Loss of signal) is an open collector output, which should be pulled up with a 4.7k~10kΩ resistor on the host board to a voltage between 2.0V and Vcc+0.3V. Logic 0 indicates normal operation; logic 1 indicates loss of signal. In the low state, the output will be pulled to less than 0.8V.
- 5. These are the differential receiver outputs. They are AC-coupled  $100\Omega$  differential lines which should be terminated with  $100\Omega$  differential at the user SERDES. The AC coupling is done inside the module and thus not required on the host board.
- 6. These are the differential transmitter inputs. They are AC-coupled, differential lines with 100Ω differential termination inside the module.
